

App errors:

1. Please increase the size of the iCab logo, as it is still not clearly visible. Also, reduce the thickness of the black border around the logo.
2. Please emboss the iCab logo in the app's intro screen for a more premium and visually appealing effect.
3. If the name is too long, it overflows outside the menu bar. Please ensure it adjusts properly within the layout
4. On the account verification page, the message 'Your documents have been verified successfully' doesn't look visually appealing. Please make it more attractive and ensure it is centre-aligned.
5. The 'Assigned Bookings' option in the menu and the 'Accepted Bookings' option in the requirements section currently refer to the same data. However, in the app, some accepted bookings appear only under 'Assigned Bookings' and others under 'Accepted Bookings'. All accepted bookings should be visible in both sections. Also, please rename both options to 'Assigned Trips' for consistency.
6. Throughout the entire app, wherever a loading symbol is shown, please replace it with the running car animation. Also, slightly increase the size of the running car symbol for better visibility.
7. The city preference feature is not working. When a user adds a preferred cities, only bookings from that specific cities should be shown, and notifications should be sent only for that cities.
8. On the 'Add Vehicle' page, the vehicle number input should automatically convert any lowercase letters entered by the user into uppercase. This should apply only to the vehicle number field.
9. On the 'Add Vehicle' page, please add an additional field for 'Vehicle Name'. It should include a dropdown with selectable options, as well as allow the user to type a custom name if needed.
10. On the 'Add Vehicle' page, the RC Book photo upload should allow only the camera option, while other documents such as PUC, Fitness, and Insurance should provide both camera and gallery upload options.
11. The gallery icon is not correct — its angle or orientation is off. Please replace it with a properly aligned gallery logo.
12. After clicking the 'Add Vehicle' button, if any required field is left empty, the screen should automatically scroll to that specific field. The empty field should blink twice with a red border, along with a red instructional message indicating what needs to be filled.
13. The 'Exchange Booking' and 'Available Booking' options are missing in the notification settings. Please add both options. By default, all other notifications should be turned ON, while only 'Exchange Booking' and 'Available Booking' should be OFF by default.

14. On the Premium Membership page, once a user selects a plan, the plans below it are not scrolling and are not visible. Please ensure that all plans remain visible and scrollable after selecting any plan.
15. If a user selects a plan and later wants to deselect it, they should be able to do so by clicking on the same selected plan again.
16. If a user already has an active subscription and purchases another plan while the current one is still active, the new plan should start from the date the current plan expires. Until then, the new plan should be displayed as 'Upcoming Plan'
17. If a user selects a specific language—for example, Marathi—then that language should remain selected every time the app is opened. The language should not change unless the user manually updates it from the settings.
18. The 'Logout' option is not properly aligned. Please adjust its alignment and slightly increase its size for better visibility.
19. The checkbox for 'Only Premium and Verified Users' is missing from the Add Booking page. Please add this option and ensure it is clearly visible and functional.
20. While purchasing any Premium Membership plan, two payment options should be displayed: Wallet and Online Banking.
21. There is currently no option to add money to the wallet. Please add a option that allows users to top up their wallet balance.
22. The admin panel should have full authority and visibility over each user's wallet, including transaction history, current wallet balance, and withdrawal requests.
23. When a user requests a withdrawal, the admin panel should provide an option to transfer the requested amount. Once the transfer is completed, the wallet balance should be automatically updated both in the app and on the admin panel.
For example, if a user has ₹1000 in their wallet and withdraws ₹500, the balance should automatically update to ₹500 in real-time across both platforms.
24. In the admin panel, there should be a dedicated 'Requests' page that displays all types of user requests in one place—such as approval requests, withdrawal requests, and any other actions initiated by users. This will help the admin manage and respond to all user activities efficiently
25. The 'Report User' feature, which is meant for reporting a user as fraudulent, is not functioning correctly. When someone tries to report a user, it shows the message 'Fraud user not found,' which is incorrect. This is a malfunction—since the user is reporting someone as fraud, the system should not be trying to 'find' a fraud user. Please fix this issue so users can report others without this error.
26. If a user receives 3 fraud reports, the system should automatically suspend their account from the admin panel. Whenever the suspended user tries to open the app, a message should be displayed stating: 'Your account has been suspended by the system due to multiple fraud reports. Additionally, the admin panel

should include manual controls that allow the admin to suspend or reinstate a user account at any time.

27. If someone clicks on a user's posts, and the user hasn't posted anything, the page should display a message saying: 'This user has not posted anything yet.'
28. When I apply a filter—such as Hatchback or Sedan—the related bookings are not being displayed. Please ensure that the filter functionality works correctly and shows bookings according to the selected vehicle category
29. If the user hasn't added any comments to a booking, the comment section should not be displayed at all. Additionally, if the user hasn't entered any amount, it should show '₹ N/A' instead of leaving it blank.
30. If the user has written a long comment, it should be displayed in full without being cut off or truncated.
31. On the Add Booking page, please interchange the positions of the 'Budget' and 'Trip Type' fields.
32. The timer for Instant Booking is not functioning correctly. For example, if the current time is 12:00 p.m. and a booking is scheduled for 12:45 p.m., the timer should show the remaining time until the booking (i.e., 45 minutes), not start a 2-hour countdown from the moment the page is opened. The 2-hour condition is only meant to determine which bookings are eligible to be shown—specifically, those that are scheduled within the next 2 hours, either from the website or posted by users.
33. The profile photo must be a mandatory selfie taken directly by the user and must be verified before the profile is considered complete. If the user has not set a profile photo, their profile should not become active.
34. When a user attempts to delete a booking, it should not be deleted immediately. A confirmation message should appear asking the user to confirm the deletion before proceeding.
35. As discussed during our last in-person meeting, please ensure that a re-upload option is available for bookings from the 'History' section under 'My Trips' in the app.
36. On the Requirements page, bookings that have already been confirmed should automatically move to the bottom of the list, while unconfirmed bookings should remain at the top.
37. **While adding an Available Booking, the 'Drop Point' field should be optional. If the user leaves it blank, it should automatically display 'Anywhere'. For the 'Timing' field, there should be two selection options:**
'From Now' – to indicate immediate availability.
'Select Time' – where the selected time should be prefixed with 'After'.
For example: 'After 09:00 PM'
38. As previously discussed, Premium Membership will not be launched at the time of the app release. We plan to enable it 2–3 months after launch. To manage this,

please add a toggle option in the admin panel to enable or disable Premium Membership. When the toggle is OFF:

- Premium features should remain visible in the app.
- However, all restrictions or access control messages (e.g., 'Only for Premium Users') should be disabled.
- All users, regardless of their membership status, should be able to access and use all Premium features freely.
- Once the toggle is turned ON, all Premium-related restrictions and access conditions should automatically become active

39. The current pop-up messages for success and error don't look good. Please redesign them to appear more professional, visually appealing, and user-friendly.
